Professional Profile

Computer Science Engineering graduated from Universidad Politécnica de Sinaloa with a deep passion for the IT ecosystem. Proficient in TypeScript and JavaScript (ES6+) with a strong focus on the React ecosystem and modern frontend architectures. I am dedicated to building responsive, high-performance web experiences while staying at the forefront of UI/UX trends and industry best practices. I also have some practical experience with backend technologies.

Professional Experience

April 2020 – June 2025
e-Quality and TCS: HERBALIFE (Consultant) – Guadalajara, Mexico
Role: UI Developer (Full-time)

- I was part of the Root team for myHerbalife.com site e-commerce platform for independent distributors. As UI developer I was involved in multiple developments, supporting tools and content for more than 100 countries:
- Internal tool development for myHerbilife.com site to register development working sessions helping to manage control versions through multiple development environments.
- Ongoing updates to the homepage content, including menus, interactive banners, and widgets. Always prioritizing responsive design.
- Continuous work with content, design, backend and business teams for new web tools and content design implementation.
- Widget implementation consuming internal APIs from all the different businesses involved in myHerbalife.com project, development and maintenance.
- Follow up any activity related to front-end development in multiple projects and solutions.
- Estimate time and efforts for future tasks and developments.
- Technical training for new team members.
- Release version management using Azure services and working closely with DevOps team.
- Major update for Register, Login and Profile styles of myHerbalife.com site, matching the styles of the Herbalife's new web platform, implementing pixel-perfect interfaces from designs in Figma.
- Support Bug problem solving for new Herbalife project using React and microservices architecture.

May 2018 – April 2020
HALLMG CONSULTING – Guadalajara, Mexico
Role: Full Stack Developer (Full-time)

- As part of the Development team I collaborated on multiple web projects, all oriented to web systems for Human resources tools for more than 10 companies with different business orientations like education, real state, pharmaceutical, energy and others.
- Setting up new web development projects using Laravel, Laravel Mix (Webpack), PHP, MySQL, Git and cPanel/Plesk.
- Implement web designs through programming languages like HTML, CSS, JavaScript, also frameworks and libraries like Bootstrap and jQuery.
- Responsive design implementation.

- Constant teamwork with the design and business department analyzing UX and UI requirements to build intuitive interfaces.
- SEO techniques implementation like sitemaps, site optimization, figuring out what are the best keywords for meta descriptions according to the project.
- Functional testing, looking at a particular piece of functionality on the websites to ensure it does everything according to the code, usually making use of browser developer tools to debugging and finding out how the page is interpreting the code.
- Web performance optimizing and minifying CSS. JavaScript and implementing techniques like lazy loading for images.
- Package installation via NPM (Node Package Manager) and implementation.

April 2015 – December 2017
TATA CONSULTANCY SERVICES (General Electric) – Guadalajara, Mexico
Role: Web Developer (Full-time)

- Development, maintenance and content administration for multiple web communities and web tools destined to be used by different business teams inside General Electric. Working with Support Central CMS/API's and entire custom developments.
- Meetings with the customer three times per week to take notes and analyze requirements, timelines and risks for future developments; keep the customer updated on the current developments and maintenance activities for web communities, tools, forms and databases.
- Write documentation and support users on how to use data report control tools.
- Support documentation and help desk teams in multiple solving problem tasks.
- Technical training for new team members.
